

1. Introduction
 The purpose of this study is to investigate the effects of the independent variable on the dependent variable. The study is based on the following hypotheses:
 H1: There is a positive relationship between the independent variable and the dependent variable.
 H2: There is a negative relationship between the independent variable and the dependent variable.
 H3: There is no significant relationship between the independent variable and the dependent variable.
 The study is based on the following assumptions:
 A1: The data is normally distributed.
 A2: The data is independent.
 A3: The data is homogeneous.
 The study is based on the following limitations:
 L1: The sample size is small.
 L2: The study is based on self-reported data.
 L3: The study is based on a cross-sectional design.

Methodology

1. Sample
 The sample consists of 100 participants who were recruited from a local university. The participants were randomly selected from a list of all students enrolled in the university.

2. Measures
 The independent variable was measured using a self-report questionnaire. The dependent variable was measured using a self-report questionnaire. The questionnaire was based on the following items:
 Item 1: I feel confident about my abilities.
 Item 2: I am satisfied with my performance.
 Item 3: I am motivated to learn.

3. Procedure
 The data was collected using a self-report questionnaire. The questionnaire was distributed to the participants and they were asked to complete it. The data was then analyzed using statistical software.
